

## Posterior Predictive Check

Model-predicted lines should resemble observed data line

— Observed data — Model-predicted data

## Linearity

Reference line should be flat and horizontal

## Homogeneity of Variance

Reference line should be flat and horizontal

## Collinearity

High collinearity (VIF) may inflate parameter uncertainty

● Low (< 5)

## Influential Observations

Points should be inside the contour lines

## Normality of Residuals

Points should fall along the line
